

PRYDA FASTFIX™ STUD TO WALL PLATE SCREWS FOR STICK BUILT FRAMES

Committed to making life faster and easier on the build site, Pryda has introduced new Stick Build Framing Screws to the Pryda FastFix™ family. These new framing screws are a safer, stronger, and faster engineered solution for securing wall plates in stick-built frames. The new range is suited for on-site stick build construction to provide a secure Stud to Wall Plate connection.

PRODUCT DETAIL

LARGE DIAMETER HEAD
Superior hold down strength

WIDER THREAD
High resistance to withdrawal

**LONG HIGH PITCH
THREADED LENGTH**
Greater capacity & faster install

STAMPED SCREW HEAD
For easy identification & Certification purpose

- All screws are head stamped to ensure quality and instant identification of the screw size and length.
- Identification tags are available to quickly identify where the screw isn't easily visible, supporting a seamless certification process (easy to validate below the top plate).
- The screws are laboratory tested and verified in accordance with relevant Australian Standards.

View the Pryda FastFix™ Stick Build Framing Screw instructional video, which demonstrates the strength of the product and its use onsite. The Pryda FastFix™ Stick Build Framing Screw range is available to purchase from your local Hardware Store.
